                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel modified RAWIT (RNA amplification with in vitro translation) method, for synthesizing polypeptides encoded by sequences of interest. The method generates a protein from an RNA molecule and comprises (a) incubating the RNA with reverse transcribtase to form cDNA; (b) amplifying the cDNA of step (a) to generate DNA copies of the cDNA in the presence of at least 1 oligonucleotide primer which with an RNA promoter sequence; (c) transcribing the DNA generated with an RNA polymerase to form RNA transcribits; and (d) translating the represents a fragment of the bovine Factor IX protein which is used to illustrate the RAWIS (RNA amplification with transcript sequencing)
                                                                                                                                                                                                                                                                                                                                                                                                                                                        ς
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Producing polypeptides from nucleic acid sequences of interest using a modified RAWIT (RNA amplification with in vitro translation) method - \,

Sequence 7, Application US/09261416A
Patent No. 6291663
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: O'Brien, Timothy J.
APPLICANT: Underwood, Lowell J.
TITLE OF INVENTION: TADG-12: A No. 6291663el Transmembrane Serine Protease
FILE REFERENCE: D6192 verexpressed in Ovarian Carcinoma
FILE REFERENCE: D6192 verexpressed in Ovarian Carcinoma
CURRENT FILING DATE: 1999-03-03
NUMBER OF SEQ ID NOS: 14
                                                                                                                                                                                                                                                                                                                           APPLICANT: O'Brien, Timothy J.

Sequence 4, Application US/09027337B
Patent No. 5972616
GENERAL INFORMATION:
APPLICANT: O'Brien, Timothy J.
APPLICANT: Tanimoto, Hirotoshi
TITLE OF INVENTION: TANG-15: An Extracellular Serine Protease Overexpressed in TITLE OF INVENTION: Tandovarian Carcinomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FEATURE: OTHER INFORMATION: Serine protease catalytic domain of Scce homologous to OTHER INFORMATION: similar domain in TADG-15

OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
RAPLICATION NUMBER: US/09/012,431
FILING DATE: 23-Jan-1998
CLASSIFICATION: <UNknown>
                       COMPUTER FRADABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: Eleppy disk
COMPUTER: Eleppy disk
COMPUTER: THE PC compatible
COMPUTER: THE PC compatible
COMPUTER: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/639,075A
FILING DATE: 24-APR-1996
CLASSTFICATION: 424
ATORNEY/AGENT INFORMATION:
NAME: Connell, Gary J.
REFERENCE/DOCKET NUMBER: 2618-25-C2
REFERENCE/COCKET NUMBER: 2618-25-C2

                                                    SUBCELLULAR LOCATION: Extracellular.

SUBCELLULAR LOCATION: Extracellular.

PROSELLY THERE ARE 4 SURFACTANT CONSISTS OF 90% LIPID AND 10% PROTEIN. THERE ARE 4 SUBFACTANT ASSOCIATED PROTEIN: 2 COLLAGENOUS, CARBOHYDRATE-BINDING GLYCOPROTEINS (SP-A AND SP-D) AND 2 SNALL STYDROPHOBIC PROTEINS (SP-B AND SP-C).

SIMILARITY: CONTAINS A COLLAGENOUS DOWAIN.

SIMILARITY: CONTAINS 1 C-TYPE LECTIN FAMILY DOMAIN.
        MICROORGANISMS. BINDS STRONGLY MALTOSE RESIDUES AND TO A LESSER EXTENT OTHER ALPHA-GLUCOSYL MOIETIES. IT COULD PARTICIPATE IN THE EXTRACELLULAR REDGRANIZATION OR TURNOVER OF PULMONARY SURFACTANT. SUBUNIT: OLIGOMERIC COMPLEX OF 4 SET OF HOMOTRIMERS.
                                                                                                                                                                                                                                                                                                                         SMART: SMOUU34; CLEC., 1.

"ToxR proteins with substitutions in residues conserved with OmpR fail to activate transcription from the cholera toxin promoter.";
J. Bacteriol. 174:6807-6814(1992).

-!- FUNCTION: THIS TRANSCRIPTION ACTIVATOR CONTROLS CHOLERA TOXIN, PILUS COLONIZATION FACTOR AND OUTER MEMBRARE PROTEIN EXPRESSION IN VIBRIO CHOLERAE. IT BINDS TO THE 5'-TTTGAT-3' TANDEMLY REPEATED DNA SEQUENCE IN CHOLERA TOXIN PROMOTER REGION. TOXS INTERACTS WITH THE C-TERMINAL PERIPLASMIC DOMAIN OF TOXR, STIMULATING ITS ACTIVITY. IT ACTIVATES TRANSCRIPTION AT THE PROMOTERS FOR TCPI AND TCPA AND THIS IS PRESUMABLY VIA TOXT.

-!- SIMILARITY: TO E.COLI CADC, AND TO THE C-TERMINI OF A GROUP OF TRANSCRIPTIONAL ACTIVATORS (OMPR-LIKE PROTEINS).
                                                                                                                                "Expression of ToxR, the transcriptional activator of the virulence factors in Vibrio cholerae, is modulated by the heat shock
                                                                                                                                                                                                      SEQUENCE OF 263-294 FROM N.A. MEDILINE-91098651; Pubmed-1898871; Dirita V.J., Mexalanos J.J.; Periplasmic interaction between two membrane regulatory proteins, ToxR and ToxS, results in signal transduction and transcriptional
               'DNA sequence of both chromosomes of the cholera pathogen Vibrio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    InterPro; IPR001867; Trans_reg_C.
